Press Release

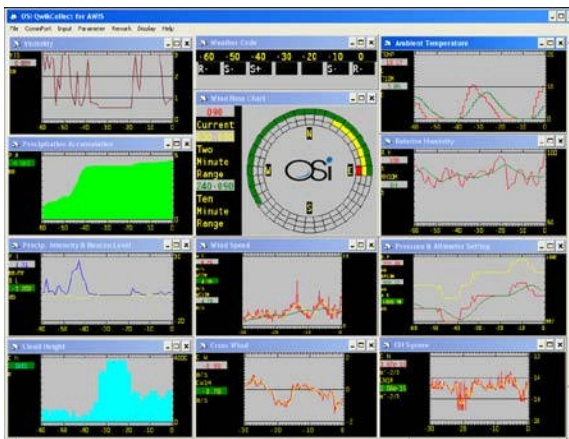

Gaithersburg, MD, September 2006: Optical Scientific, Inc. (OSi) announces the introduction of the Optical Scientific Data Acquisition Processor (ODAP). OSi, best known as a sensor manufacturer, has long been a provider of present weather and visibility sensors to ASOS, AWOS, and RWIS manufacturers and system integrators. The ODAP allows easy interface to a suite of meteorological sensors.

The ODAP allows the customer to purchase a turn-key meteorological system directly from OSi. Although OSi, has always provided meteorological systems to end users by special request, most often the end user had the task of integrating the OSi sensor into their system. Now the end user has the option of purchasing the complete system from OSi.

ODAP

In addition to the well known OSi Weather Identifier and Visibility Sensor (WIVIS), the ODAP easily interfaces to OSi's wind, temperature, humidity, and barometric pressure sensors (other sensors available).

QwikCollect Display Software

To complement the ODAP, OSi has also updated QwikCollect, the popular OSi data display and archiving software
